

You are given a partially implemented web site which is used for displaying news. You need to implement number of functionalities in order to complete it. Required tasks are listed below with number of points successful implementation of each will bring. There are no partial credits for each task.

- (0 points) Change footer so it displays your name instead of "Student Name".
- (15 points) Create and populate database. You are given necessary MySQL code in a file included in a project.
- (25 points) Register page needs to be implemented so it allows registering new user. Register page should check if all the fields are entered before submitting a user. Make it a sticky form. (Notes: Rely on existing code. Remember to change DB connection parameters.)
- (60 points) Implement news_item.php.
 - (15 points) Display relevant news. That is display the news for which user clicked "Read More".
 - (25 points) Display all the comments for that news.
 - (15 points) Implement post comment form.
 - (5 points) Enable posting comments only if user is logged in, otherwise hide the form.
